~/Development/programming-studies/LinkedIn-Learning-Courses/AWS/AWS-Essential-Trainin.../.../.../.../05_05/phps3commands....

```
1   sudo apt install php php-simplexml composer wget php-cli php-zip unzip
2   composer require aws/aws-sdk-php
3   nano s3test.php
4
5
6
7   ===COPY BELOW HERE===
8   <?php
9
10  require 'vendor/autoload.php';
11
12  $s3 = new Aws\S3\S3Client([
13      'version' => 'latest',
14      'region'  => 'us-east-1',
15      'credentials' => [
16          'key'      => ████████████,
17          'secret'   => ████████████████████
18      ]
19  ]);
20
21  $result = $s3->putObject([
22      'Bucket'  => ██████████████,
23      'Key'     => 'testfromphp.txt',
24      'Body'    => 'This is a test upload from PHP'
25  ]);
26
27  echo "Uploading to S3.....";
28  var_dump($result);
29
30  ?>
31  ===COPY TILL HERE===
32
33
34
35  php s3test.php
36
```

Including the key and secret key in an unencrypted, publicly access-ible document is a serious error!
